

# DEEP OVERVIEW

The Faze DEEP range of luminaires utilise the most advanced LED engines available, delivering high performance, maximum efficacy and high quality illumination.

All members of the DEEP family have been specifically designed with a light source that is deeply recessed into the luminaire, resulting in optimal optic performance and maximum eye comfort.

The range features different colour temperatures, high CRI and multiple output levels, offering a solution to almost any lighting demand.

From residential to hotels, restaurants, to retail, and much more, the range focuses on minimal appearance, giving focus to the light and space, instead of the fixture.
