## ADJUSTABLE LINEAR LITE

CAT #. ALL

### Hunza's new in-grade Adjustable Linear Lite

A key feature of the Hunza Adjustable Linear Lite is the 90 degree adjustability achieved by simply turning the control knob at the end of the fixture. This feature allows the user to angle the light at the wall surface where required. Each 'dot' on the control indicates 10 degrees of adjustment allowing the user to easily select an angle, before installing the fixture into the stainless steel mounting canister (provided).

This, combined with an offset LED board situated within a channel, means the fixture has very low glare once recessed. In fact, glare is completely eliminated from all viewing angles except from directly above the fixture. This makes this product ideal for washing walls and high traffic pedestrian areas.
